

GENTRACKER™

Generator Monitoring System

By Generator Solutions, Inc.

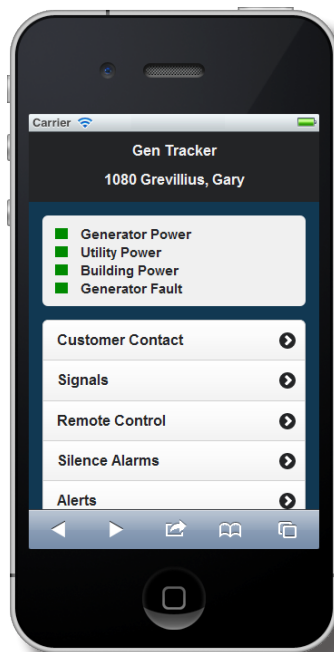

Finally, a simple and affordable solution for your standby generator. Now you and your service company can work together to keep your generator running at peak performance.

The Gen-Tracker system is a universal reporting and notification system for standby generators. It is your solution whether you have one generator or thousands, small 8kw or large 2MW, we've got you covered.

You may ask yourself, do I need a monitoring system for *my* generator? The answer, quite frankly, is **YES**. Here are some things to consider:

- Gen-Tracker gives you control over your generator, the power to be proactive.
- Receive automatic emailed reporting/documentation.
- Send SMS Text Message and Email notifications to as many recipients as needed.
- Cut back on Quarterly and Semi-Annual inspections.
- Save on labor costs, no longer manually logging reporting data.
- Prevent expensive afterhours/emergency rates.

- Over 90% generator failures occur during the regular exercise
- There are more and more regulations that require detailed reporting
 - City/State Emissions
 - Peak Shaving/Load Shedding
 - Insurance programs
- Your generator service company has hundreds or thousands of customers and generators to care for. Gen-Tracker helps you take priority.

Web Portal

Secured and easy to use web portal allows you to see what your generator is doing from anywhere in the world. Manage your notifications and reports, view history summaries and detailed events.

How it Works

Each Gen-Tracker system is installed at the Transfer Switch or the Generator itself and communicates to the Gen-Tracker Dealer / Service Company and communicates to the Gen-Tracker Data Center in Minnesota which processes and issues notifications and reports to the service companies and end users regarding their generator(s).

Working together with Gen-Tracker and your service company, you can rest assured. Your generator will work when you need it.
