## Generator Monitoring System

**Will your generator work when it matters most?**

**Let us and GEN-TRACKER watch it for you, so you won't be left in the dark...**

The Gen-Tracker generator monitoring system is a one-of-a-kind solution to ensure your home, cabin, or home office stand-by generator will work when you need it to. Most generators will initially fault out and cease operation during the scheduled exercise and our system allows us to see that missed exercise or fault reading when it happens. Allowing us to address the problem sooner, act faster, and fix the issue before you experience an outage and don't have an operating generator when you need it most.

### **The Gen-Tracker system gives you Peace-Of-Mind!**

Gen-Tracker offers three ways to communicate with the Gen-Tracker data center; by cellular, by phone, or by internet. (The cellular system is the most versatile, easy to install, and the only system to perform the remote starts from your website login.) The data is then processed by the Gen-Tracker data center and available to you via the secure, password-protected website. Notifications of critical generator functions and specialty reports are also provided, by email and/or cell phone text messaging (standard text messaging rates apply). No hidden fees, cellular contracts, or complicated setup.
